AGE CORE PHOTO CARD v5

Scale is the 5 mm core itself. The print is a target, not a ruler.

TONER CHECK **WHITE REF**

App reads these to set its own threshold.

RULER LANE - lay an opaque ruler here, never over a core

50 mm comb - check only, not used for scale

CHANNEL A - pale cores. Lay the core on the black, ends to both edges.

CHANNEL B - dark cores. Core must touch both black rules.

100.00 mm nominal - DRIFT CHECK ONLY, not used for scale

5.00 mm nominal - app compares this with the measured core

1 Core scale: the app measures the core's own 5 mm diameter. Print size does not enter the count.

2 Use CHANNEL A for a pale core, CHANNEL B for a dark one. The whole core should lie in one channel.

3 Cores under 10:1 length to width are refused rather than counted.

4 Ruler in the lane is an extra check. It is not needed for the count.

5 One photo per channel. Overlapping shots are not stitched.

6 Count the whole core at once. The 50 mm ticks are position reference only.

7 The two patches at top right let the app set its own threshold from this print.

Channel 273 mm long against a 5 mm core = 55:1. Solid black only, no greys, minimum stroke 1.2 mm.
