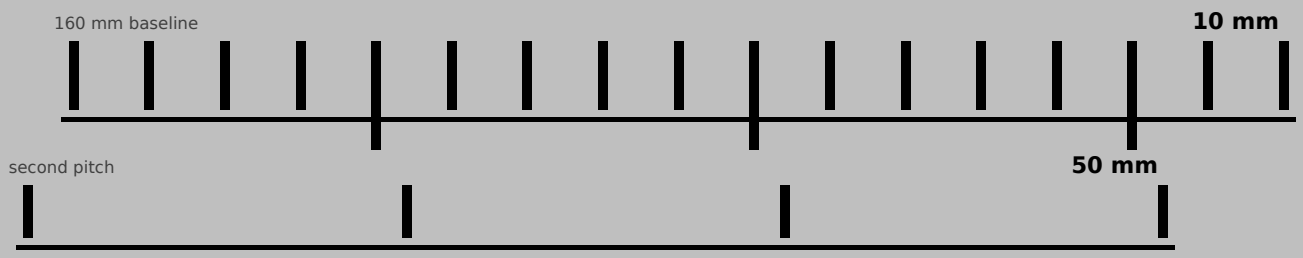
AGE CORE PHOTO CARD v3

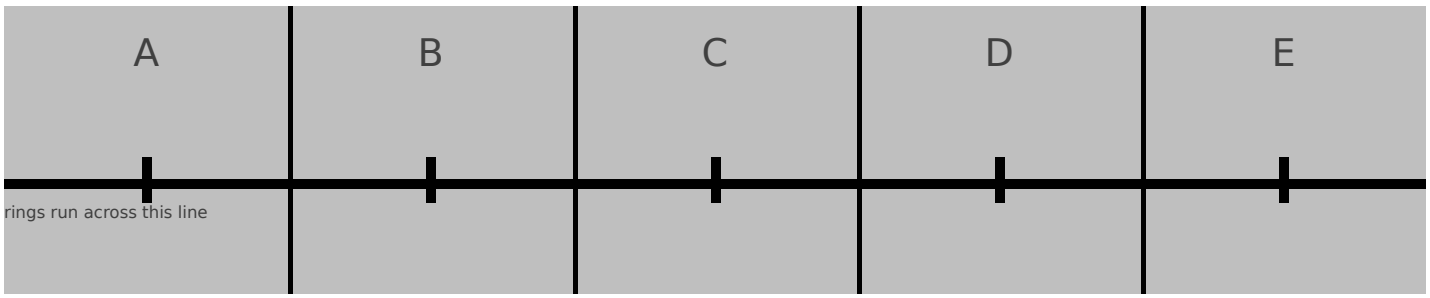
scale comes from your ruler, not from this page

CALIBRATION LANE - keep clear of cores



10 mm comb: 17 marks, 160 mm baseline. 50 mm comb is a second pitch - if the two disagree, print or lens is at fault.

CORE BAYS



PRINTED CROSS-CHECK - not used for scale

nominal 100.00 mm

printed cross-check only - not used for scale

OPTICAL RESOLUTION TARGET

2 1 0.7 0.5 0.35

mm per black/white pair - the finest group the app can still resolve is the true limit at the core's distance

white ref

HOW TO USE

1 Lay the plastic ruler across the top lane. Any straight ruler with 1 mm graduations works.

2 The app measures the ruler's millimetre graduations, not this card, for scale.

3 Ruler origin does not matter: only the graduation pitch is used. Edge and 0 mark may differ.

4 Place one core per bay, A to E. Keep the core off the top lane entirely.

5 Align the ruler's long edge with the table edge so every photo is shot the same way.

6 This card's 100 mm bar is a drift check only. It is printed, so it may be inaccurate.

Bar period, mm - do NOT scale to fit. Matte paper only.
